

CBD For Everyday Health

WHAT IS CBD ISOLATE?

Simply put, hemp CBD isolate is cannabidiol in its purest form possible. CBD isolate crystals are a fine white powder that only contains the Cannabidiol chemical compound. **CBD isolate powder and CBD isolate crystals are the purest, most powerful punch of CBD available.**

THE CANNABIDIOL ISOLATE PROCESS

Using the same Cannabidiol hemp oil available in all TruHemp CBD products, the process removes all of the oils, plant material, waxes, chlorophyll, and more, **leaving behind the pure Cannabidiol.** The CBD isolate is extracted from non-GMO using supercritical CO₂, a process regarded as safe by the FDA.

CBD ISOLATE PROCESS

The CBD isolate extraction process produces a botanical concentrate that includes the cannabinoids, fatty acids, and other plant material found naturally in hemp plants. The CBD hemp oil is then purified (using a proprietary process to filter plant material and then winterized to remove impurities) to remove excess waxes, producing a pure isolate powder with 99% pure Cannabidiol. The CO₂ extraction process is a more expensive but non-toxic and extremely efficient method to obtain CBD oil. It requires complex equipment and expertise, but uses safe solvents and ensures a highly potent and pure extract.

The CBD oil obtained through super critical extraction is a **full spectrum cannabinoid-rich product, with numerous health benefits.** The oil is transparent and has an amber color, being more qualitative than the fluid obtained through other techniques.

To further ensure the reliability of our CBD isolate, we hold it to the same **strict triple lab tested standard** that all TruHemp products must go through. This lab testing process uses ISO/IEC 17025:2005 accredited testing labs to carefully examine our hemp oil to protect the end user from any contamination.

HOW IS UNREFINED, COLD PRESSED HEMP OIL MADE?

Unrefined, cold pressed hemp oil is obtained from hemp seeds with mechanical extraction at a low temperature that doesn't exceed 40 degrees Celsius. Cold pressed hemp oil is not chemically cleaned or bleached and the sediments are removed mechanically using filtration.

ZERO TASTE OR SMELL

100% CBD isolate with no measurable levels of THC or dense plant material left, crystallized TruHemp makes it a perfect choice for formulation. The Cannabidiol isolate powder has no taste or smell to it and can be integrated into a number of products. And because it is completely THC-free, TruHemp CBD isolate is safe for use by all customers and all ages.

WHY WE USE HEMP OIL TO CARRY OUR CBD

Hemp oil is referred to as the most perfectly balanced oil created by nature. This is due to the perfect balance of unsaturated Omega 3 and 6 fatty acids that cannot be found anywhere else. Hemp oil is also rich in vitamins, antioxidants, and other health beneficial substances. However, this only applies if the oil is cold pressed, as only unrefined hemp oil preserves all the nutrients contained in the hemp seed.

NON-GMO

Our hemp is expertly grown free of pesticides, herbicides, and chemical fertilizers to protect our customers from residual contaminants in our final products. The combines we invented were designed to cut down the hemp stalk in a very precise way – providing the highest possible concentrations of phytocannabinoids, while minimizing waste.
